**DETAILED ACTION*****Allowable Subject Matter***

1. Claims 1-12 are allowed.
2. Light-shielding containers and light-sensitive material packages having a light-shielding cloth comprising a pile fabric are known in the art. For example, US 4,568,590 issued to Iwai teaches a teremp cloth used for blocking light from entering an opening of a film container, said cloth comprising a knit pile fabric having a pile density of 30,000 fibers/cm<sup>2</sup> (abstract and col. 3, lines 10-14). Similarly, US 5,358,198 issued to Lesley discloses a container for a light-sensitive strip material comprising a light-shielding teremp cloth comprising a warp knit, weft inserted pile fabric which is dyed black (abstract and col. 1, lines 9-16 and 45-58). It is also known in the art to employ conductive thermoplastic fibers, such as nylon fibers doped with carbon black, as pile fibers for a teremp cloth. Said doped black fibers function by shielding light and reducing static electricity. See partial translation of JP 55-012917 (JP 62-040696) and abstract of JP 02-093456. Furthermore, teremp cloths comprising two types of yarns are known. In particular, US 5,271,983 (EP 452 900) issued to Ise et al. teaches blending regular and special bulked or crimped yarns to form a teremp pile fabric. However, the prior art does not teach or fairly suggest a light-shielding container or light-sensitive material package including a teremp fabric comprising (a) 5-60 wt. % of black dope-dyed pile yarns and (b) black-dyed pile yarns, which are arranged in stripes that are substantially orthogonal to the direction in which the light-sensitive material is passed. Therefore, claims 1-12 are allowed.
